HYDRA

About
Our Company

Hydra Ecosystem is decentralized finance built on ethereum network, Hydra is a POS (Proof of Stake) blockchain. Everyone can become a full node in a few clicks and stake HYDRA to help maintain the network. Stakers receive a high economic stream through block rewards, awarded by the blockchain

HYDRA
Awesome Project

Team behind Hydra Ecosystem experienced on blockchain more than 5 years, especially on a digital currency in which transactions are verified and records maintained by a decentralized system using cryptography, rather than by a centralized authority

Why Choose Us?

Hydra Chain is a high-throughput blockchain capable of 65K transactions per second (TPS). So, Hydra Chain can maintain lightning speeds as the transaction volume rises on the DEX.

Our Hydra Ecosystem has a rapid processing times, Ethereum averages 0.5 second processing times, making it the fastest blockchain in the world. There will be no waiting around for transactions to complete on Hydra Ecosystem.

Our Advantages

DApp (Distributed Applications)

Developers can create their own token on top of the Hydra Ecosystem. Any wallet can interact with Hydra Ecosystem blockchain via lightweight JavaScript library or using gRPC API natively (many supported languages Java, Go, Python, C++, etc.). There will also be support for JiT & WebAssemly for developers.
Hydra Mainnet

Application Layer

These are the applications that run on top of the Hydra Network.The code is written in DApp (Decentralized Applications), digital wallet or to a smart contract using RPC (Remote Procedure Calls) that reference API that communicate with the other layers. Code execution is performed by the Hydra Network Virtual Machine (SVM) on nodes throughout the network.

Smart Contract

Smart contracts on Hydra Ecosystem are executable code contracts that follow the Ethereum framework. At the moment, smart contracts written in Solidity are supported.

USE CASE

Hydra Ecosystem is a decentralized finance (DeFi) project that has recently gained attention in the cryptocurrency world. This project aims to address some of the issues that have plagued the DeFi space, such as high transaction fees, low transaction speeds, and limited scalability

ROADMAP

PHASE 1

Project Creation
ERC20 Contract Creation
Uniswap launch
Community Telegram
Website Live
Dex Live

PHASE 2

Telegram Marketing
Twitter Marketing
Etherscan Update
Whitepaper Update
Partnership
Audit
Dextools

PHASE 3

Website Listing Token
Top Trending Dextol
Coinmarketcap Apply
Coingecko Apply
